The GrainPro® Cocoon™ is a flood protected, hermetic, gas-tight storage container designed for organic use and long-term storage of dry agricultural commodities. It is made of flexible UV-resistant polyvinyl chloride that has low permeability to oxygen (O₂), carbon dioxide (CO₂), and moisture. It also has a transparent plug that allows users to monitor the relative humidity (RH) inside the GrainPro Cocoon™. The GrainPro® Cocoon™ is able to withstand floods below the zipper line, protecting commodities from erratic weather conditions. It can also maintain the gas resulting from the respiration of insects and commodities, meaning the low oxygen levels and high carbon dioxide levels can naturally control infestation and mold growth.

ADD ON: Gas Hermetic Fumigation (GHF) version of GrainPro® Cocoon™ with an inlet port for easy fumigation. The GHF version is designed for CO₂ fumigation to immediately control any infestation using a CO₂ cylinder
